## REASONS FOR ALLOWANCE

### *Allowable Subject Matter*

1. Claims 2-16 and 18-32 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to teach a method, system and apparatus for controlling power in a wireless communication system having a base and a Multiple Carrier Power Amplifier (MCPA) split into at least two separate units by coupling the two separate units with an interface providing an aggregate signal representing one or more carrier signals across the interface from the base station to the MCPA; measuring a gain level during an interval; providing a first and second control parameter from the base station to the MCPA across the interface; controlling the measuring of the gain level using the first and second parameters and feeding back information across the interface from the MGPA to the base station associated with the measured gain level.

Waylett in view of Caspo, cited in the last office action disclosed a method and system for controlling power in a wireless communication where Waylett described a base station and a power amplifier split into at least two separate units, coupled by and interface, such that an aggregate signal representing one or more carrier signals went across the interface from the base station to the power amp where Waylett measured the gain and controlled the gain with feedback information across the interface. Waylett discussed that the power amp could be any type of amp, and therefore, Caspo was used to show that it would be obvious to use an MCPA. Waylett and Caspo however failed to teach the above the system as just state along with providing a first

and second control parameters from the base station to the MCPA across the interface; and controlling the measuring of the gain level using the first and second parameters.
